

# Agri Green t61

The industry's long awaited new green natural color additives to reform the food industry!

The green color of matcha and tea is chlorophyll, which is familiar to the Japanese people. But there are several problem with Matcha green as easily fading the color by light and air expose.

We want to make a [ new green ] with completely natural ingredients!

Agri Green was created by combining turmeric powder, and the popular Thai beauty herb Butterfly Pea, using our proprietary crushing and sterilization technology.

The bright green color comes from the polyphenol, curcumin in turmeric and the polyphenol ternatin (anthocyanin) in butterfly pea, both are relatively stable to heat and light.

We Advanced agri control the production of butterfly pea ingredients from start to finish, and we insist on producing the beautiful blue butterfly pea, which is essential for the wonderful green color of The Agri Green.

It can express many colors by changing mix ratio.
